SUMMARY

Versatile and resourceful Full Stack Developer with a foundation in the MERN stack and JavaScript. Built an end-to-end inventory management system, gaining practical experience in both frontend and backend development, from crafting user-friendly interfaces to managing complex databases. Quick to learn and adaptable, excited to contribute as a full stack developer within a team that values innovation, collaboration, and technical growth.

TECHNICAL PROJECTS

Inventory Management System

Description: Built a full-stack system to manage inventory with React and JavaScript, supporting CRUD operations through REST APIs and MongoDB for data storage.

Outcome: Strengthened MERN stack skills and enhanced JavaScript Script proficiency.

[Demo:](https://anan-ims-app.netlify.app/) <https://anan-ims-app.netlify.app/>

Password Reset Application

Description: Developed a secure password reset feature with a React interface, handling token-based authentication with Express and MongoDB for secure data management.

Outcome: Gained experience in user authentication and secure API practices.

[Demo:](https://anan-password-reset-app.netlify.app/) <https://anan-password-reset-app.netlify.app/>

URL Shortener Application

Description: Created a URL shortener with a clean UI in React and backend logic in Express to generate short links, storing data in MongoDB for quick lookups.

Outcome: Improved understanding of database indexing, URL mapping, and efficient data handling.
